

**iPhone** – (640 pixel wide X 960 pixel high): Example – *iPhone 4S actual size*

**Notes:**

The phone defaults to a tiny zoomed out view. But it will need to be zoomed in, and scrolled to see everything.  
Using float in CSS will allow most of the scrolling to be up and down.  
Using the drop down menus will allow more content to be viewable. It will also allow for easier navigation due to the larger size of the links.  
This is the Home Page
